

T-8 Special U.V. Filtering Tubes

The “**Dark Amber/Yellow**” color filtering tube is manufactured from a special blend of materials with an increased wall thickness of .040”. This tube eliminates all UV rays and has 0% transmittance below 525 nanometers. This tube is intended for use in photo labs, clean rooms, and in areas where printed circuit boards are manufactured.

Outside Tube Diameter: 1.235" Nominal

Check your individual application to determine which tube is necessary for your filtering requirements.
